

A Case Study on the New Field of Anesthesia

Reena Kadni *

Kadni R. A Case Study on the New Field of Anesthesia. 2021;4(2):0-1.

Anesthesia (from the Greek "without sensation") is a regulated, temporary loss of sensation or consciousness that is caused for medical reasons. Critical care medicine, also known as intensive care medicine, is a subspecialty of medicine that deals with providing life support to critically ill patients.

The clinician selects one or more medications in advance of a surgical procedure to obtain the forms and degrees of anaesthesia that are necessary for the procedure and the patient. I am delighted to present Volume 4, Issue 2 of the journal on behalf of the Board of the Anesthesiology Case Reports and my coeditors. The magazine, which was established in 2021, has now published four volumes and three issues per year.

EDITORIAL

Anesthesia (from the Greek "without sensation") is a regulated, temporary loss of sensation or consciousness that is caused for medical reasons. Critical care medicine, also known as intensive care medicine, is a subspecialty of medicine that deals with providing life support to critically ill patients.

The clinician selects one or more medications in advance of a surgical procedure to obtain the forms and degrees of anaesthesia that are necessary for the procedure and the patient. I am delighted to present Volume 4, Issue 2 of the journal on behalf of the Board of the Anesthesiology Case Reports and my coeditors. The magazine, which was established in 2021, has now published four volumes and three issues per year. The total number of downloads per article is rising, with 20 downloads per paper on average. Both of these are positive indicators. We were able to get to this point thanks to the continuous help of the Board of Directors and the intellectual kindness of the readers and contributors (authors and reviewers).

complexity (We also believe that more facilities for publishing clinical and experimental trials in anaesthesia and anesthesiology research, particularly in relation to medical and clinical sciences, are required. During such preparation, various non-technical aspects of an anaesthetist's day-to-day job could be discussed. Technology may also be very useful for assessing competence. Over the years, simulation has been used for technology

advancement and evaluation. As a result, it has been agreed that papers on these subjects will be accepted in our Journal, in order to highlight the importance we put on anaesthesia cultivation. Our journal publishes a number of case reports, case studies, and academic papers from all over the world. Our journal is the ideal venue for showcasing various types of case reports from around the world, as we accept submissions from physicians, eminent writers, students, graduates, and others from all over the world.

Anesthesiology Case Reports is a peer-reviewed journal that promotes numerous case reports and clinical studies in the field of the anaesthesia. Our journal publishes a number of case reports, case studies, and academic papers from all over the world. Our journal is the ideal venue for showcasing various types of case reports from around the world, as we accept submissions from physicians, eminent writers, students, graduates, and others from all over the world. We are now publishing Issue 2 of Volume 4 as a separate publication. We feel fortunate to showcase the various case reports and studies thanks to the help of eminent writers from all over the world. We'd like to express our gratitude to our steadfast faculty advisors. Our journal would not be possible without their help and support, and we are grateful for the time and effort they put into it. Finally, the outgoing board would like to extend its best wishes to the new board members for the coming year. We hope that the new board will work hard to respect the previous ten years' efforts and to instill in potential PULACR members a good work ethic and enthusiasm for academic scholarship.
