Kunyong Xu. A Path of a New Vision: The Ophthalmologist: Clinical and Therapeutic Journal. *Ophth Clin Ther.* 2020;4(1):1.

ABSTRACT

The Ophthalmologist: clinical and therapeutic journal is internationally peer-reviewed journal. The journal will publish high-quality research papers,

as well as reviews, book reviews and short technical notes designed to help ophthalmology and optometry progress in all scientific fields mentioned above. The journal's broad scope having an active Editorial Board will make, I hope The Ophthalmologist: clinical and therapeutic journal a unique journal in its position to support the researchers in all areas of ophthalmology and optometry science.

EDITOR'S NOTE

The Ophthalmologist Clinical and Therapeutic Journal covers a broad spectrum of topics in clinical and laboratory studies in ophthalmology.

The aim is to address current issues and challenges in field, gather the information from different perspectives, as well as encourage the novel and efficient therapeutic potentials for eye diseases.

Through such various formats as: case series, reviews, guidelines, techniques, and practices, the journal discusses cutting-edge ideas in eye research and establishes a platform from which to share the technical and medical advancements in field. Our knowledge about how best to care for our vision has grown substantially in the last few decades. Progress has been made in disease development, drug discoveries, surgical techniques, as well as medical devices. Even further gains will require long-term efforts from highly trained professionals worldwide so as to improve people's quality of life. We are honored to be the one serving a platform for professionals to share their observations, concerns and suggestions [1].

This peer-reviewed journal will remarkably contribute to that ideal of furthering the eye research field by evaluating and publishing the highest quality work from both professionals and professional groups alike. We believe that these potential findings will interest our readers to learn and gain new perspectives from the evidence generated by such research scholars. We also hope to help further inspiration of leading thinkers in the comprehensive aspects of ongoing disease investigations. The journal serves as a bridge to connect physicians and researchers. We believe that the joint efforts will fill the gap between clinical and experimental activities, therefore, significantly promote the research investigations and improve clinical cares for eye disorders [2].

Last but not the least, in this kind of dynamic environment with limited resources, we believe that the open flow of information will greatly push forward the understanding of the pathogenesis and development of eye disorders, followed by the advancement in exploration of new therapeutic

avenues and improvement in vision care. To achieve this, the journal provides free open access online to the researchers worldwide and presents the content to the public with no barriers or constraints. Unfettered access to the sharing of such information will also significantly benefit the progression of vital research in both developing and underdeveloped countries [3]. The Ophthalmologist Clinical and Therapeutic Journal offers the opportunity for scholars in these countries to be closely involved in updates regarding the most advanced knowledge about vision care and also to share their own findings in clinical practice and research studies; thusly, bringing up the attention and encouraging the research efforts from worldwide, promoting a potentially greater quality of life for people in all corners of the world [4].

The journal started in the year 2017, released 4 issues in one issue in year and looking to take this to further improvement by accepting articles from young researchers in ophthalmology. We take this opportunity to thank our Editorial Board Members, Authors and Reviewers for their tremendous contribution for the journal [5].

The journal is here to support and give the opportunity to new ophthalmology and optometry scientists or students to show and promote their work. Hoping that this effort will be for the benefit of all researchers relating to ophthalmology, optometry and ophthalmic optics, the journal will provide the best motivation for further research work publishing.
