

Commentary on anesthesiology case reports

Christiane Wobus*

Wobus C. Commentary on anesthesiology case reports. *Anesthesiol Case Rep.* 2021;4(6):1.

DESCRIPTION

An anesthesiologist is a medical specialist that deals with all aspects of patient care before, during, and after surgery. Anesthesia, intensive care medicine, critical emergency medicine, and pain medicine are all included. Anesthesia allows for the painless execution of medical procedures that would otherwise cause severe or intolerable pain in a non-anaesthetized person or would be technically impossible. An anesthesiologist or anesthetist, depending on the country, is a physician who specializes in anesthesia. The terms are effectively synonymous in some countries, but they refer to different positions in others, and the term "anesthetist" is only used for non-physicians like nurse anesthetists.

Anesthesiology Case Report is a peer-reviewed, Open Access, bi-monthly scholarly journal that aims to publish the most comprehensive and reliable information on discoveries and current developments in all relevant areas of the field as original research articles, review articles, case reports, short communications, technical notes, and other formats, and make them available online without any restrictions or other subscriptions to the medical research fraternity. We cater to a global audience and knowledge seekers interested in the most recent research findings from universities and industries around the world. The journal encourages and supports the publication of significant research findings.

Each issue is thoroughly chosen to include a well-balanced mix of high-quality original research, informative case studies, and thought-provoking reviews. Anesthesia drug administration, an aesthetic practice, pharmacokinetics of an aesthetic drugs, selection criteria for an aesthetic drugs, secondary effects of an aesthetic management, pre and postoperative disease complications, an aesthetic drug industries, the ethical perspective of aesthetic components, influential factors for an aesthetic action, and other anesthesia related critical case studies are all covered in this journal.

Doctors, Professors, Clinical Researchers in Anesthesia, and other specializations in Clinical Sciences and Anesthesiology are invited to contribute their latest findings and observations to Anesthesiology Case Report. The journal publishes high-quality original research and reviews in all areas of anesthesia and related clinical sciences. Under the supervision of the Editor-in-Chief or a member of the Anesthesiology Case Report Editorial Committee, all submitted manuscripts are peer-reviewed by subject matter experts. Acceptance of the manuscript for publication requires the approval of at least two independent reviewers as well as the editor. The Editorial Tracking System aids in the clarity and consistency of the peer review process by allowing authors to easily track the manuscript inspection and publication process.

Google Scholar, Directory of Open Access Journals, China National Knowledge Infrastructure (CNKI), Ulrich's Periodicals Directory, Publons, Geneva Foundation for Medical Education and Research, Free Medical Journals, and Index Copernicus all index and abstract all of this journal's published articles. Tsinghua University launched the China National Knowledge Infrastructure (CNKI) indexing project with support from the Chinese Ministry of Education, Science and Technology, and Propaganda. A similar concept is science citation indexing. Over 200 international publishers have signed copyright agreements with CNKI, which has resulted in the integration of over 50,000 journals on our cross-language search platform. The indexing of the Directory of Open Access Journals aims to be the starting point for all information searches for quality, peer-reviewed, open access material. DOAJ's mission is to improve the visibility, accessibility, reputation, usage, and impact of high-quality, open-access scholarly research journals worldwide, regardless of discipline, geography, or language.
