EDITORIAL

Nursing is outlined as the noble profession of protective, promoting, optimizing the health, preventing health problem and injury, facilitating healing, alleviate suffering through the designation and treatment of human response. Another vital part of medical care is that the scope of patient education and training. Nurses watch out of patients, render clinical application and add teams forming the personal healthcare team to help patients in learning a way to manage their own health. Their activities embrace addressing topics as healthy mode selections, handling a designation, or understanding warning signs and symptoms of rising issues with emotional intelligence. The role of each and every nurse varies relying on the work environment setting and therefore on the variety of patients.

Disaster nursing are often defined because the adaptation of professional nursing knowledge, skills and attitude in recognizing and meeting the nursing, health and emotional needs of disaster

victims. The overall goal of disaster nursing is to realize the simplest possible level of health for the people and therefore the community involved within the disaster. They should meet the immediate basic survival needs of populations affected by disasters.

The healthcare sector consists of businesses that provide medical services, manufacture medical equipment or drugs, provide medical insurance, or otherwise facilitate the provision of healthcare to patients. Economically, healthcare markets are marked by a few distinct factors. Government intervention in healthcare markets and activities is pervasive, in part due to some of these economic factors. Demand for healthcare services is highly price inelastic. Consumers and producers face inherent uncertainties regarding needs, outcomes, and the costs of services. Patients, providers, and other industry players possess widely asymmetric information and principal-agent problems are ubiquitous. The healthcare sector contains a diverse array of industries, with activities ranging from research to manufacturing to facilities management.
